comparative analysis of the tax systems in asia latin america and the new eu countries anyone who wants to know how contemporary empirical models can be used to study the political economy of the tax mix in developing and transition economies will want to read this book stanley winer carleton university canada in this original book paola profeta and simona scabrosetti use data and information on political institutions from developing and new eu member countries to investigate the political economy of taxation how do political institutions influence tax burdens and tax structures they generate highly interesting results i am sure that this innovative book will attract the attention of many experts interested in taxation regardless of the professional field to which they are anchored i expect this book will be cited often vito tanzi international institute of public finance us taxation is a major issue in the economic and political spheres this book focuses on a sample of developing countries from asia and latin america that experienced an economic and democratic transition during the period 1990 2004 using a unique dataset the authors show that tax revenue is higher in more democratic regimes consistent with the standard view that democracies have to satisfy the redistributive needs of the electorate they also find that a second relationship between the level of democracy and the composition of taxes mainly direct versus indirect is much harder to predict however a comparison with new eu member states suggests that more mature democracies are associated with higher levels of direct tax this unique book in a relatively under researched subject area will prove essential reading for academics researchers and practitioners focusing on political economy public finance and the economics of taxation

the political economy of bureaucracy applies public choice theory and a complex systems view of government institutions to analyze policy implementation as an economic process it addresses the common and vexing question of why managing federal agencies for results is so difficult by challenging traditional assumptions of institutional design and policy analysis using creative methods that focus on relationships that constrain the choices of executives and managers in a political hierarchy the author reveals control and coordination as goals that are imperfectly achieved and often conflicting with one another despite decades of intense study serious reform efforts and impressive technological advances the u s government remains a typical bureaucracy that fails to meet citizens expectations clearly policy analysis is missing something the problem may rest with machine models of government rules especially those governing expenditures are assumed to be feasible and effective analysis of the federal government as a complex system of relationships between semi autonomous agents helps explain the disconnect between policy and results the solution is to roll back micro management of ends and means policymakers should focus on objectives and facilitate implementation by selectively relaxing constraints that prevent experimentation needed to determine the most effective methods this book devotes unusual attention to the interaction between executive and legislative branches of government and between political appointees and career civil servants most studies of government policy take existing institutional structure for granted different conclusions emerge from this analysis by virtue of the systems view that accepts status quo hierarchies but questions the effectiveness of the rules that govern policy implementation this book will be of interest to postgraduates and researchers focussing on economic theory public choice institutional economics and political science as well as to those working in the public sector interested in public administration public policy and organizational behavior
